

Dear Friends,

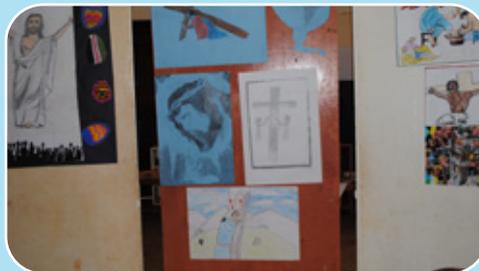

We are delighted to bring you the recent updates of Koinonia. We are grateful for the wonderful support in making a positive impact in the lives of these children. At Koinonia, the students are nurtured in all areas of development including creativity, physical, spiritual and emotional well being in addition to their academics.

FIRE DRILL

Last term, a group of Koinonia teachers attended a fire drill seminar at Kantaria hall at Redhill. A total of six staff members were trained on fire safety. We were informed of various kinds of fire extinguishers for different kinds of fires - water, powder and carbon dioxide. We in-turn conducted a fire drill for the whole school by raising an alarm of an imaginary fire from the kitchen.

All classes needed to be evacuated. We observed reactions from various students and based on this, the students were briefed on the appropriate action/behavior in such a scenario. The drill was successful and the students were informed on the need for such exercise and of servicing of fire equipment to ensure they are always prepared to handle a fire emergency.

TALENT SHOW

Our annual talent splash was held on the 1st of April 2015, during which the children show-cased their talents in

comedy, traditional dance, drama and music. Generally the event was a success and we do appreciate each

child for their God given talents. It is our earnest prayer that each one of them will realize their full potential.

INTERNSHIP

I am Joyce Njoki a student at Koinonia Education Center in high school. At Koinonia, we are privileged to express ourselves. During April holiday, I had an opportunity to work at Kyuna kindergarten in the kitchen department. It was a great experience for me as I learnt to prepare food such as cottage pie and pizza and explored many other recipes. I thank the administration for the chance I got to learn and work in the real world.

KIDS GO TECH

During April holidays we had a privilege of sending seven students to the kids go tech program sponsored by Safaricom.

The program exposes students to day to day technology and gives them a platform to think new inventions in plan with vision 2030. This time, Alex one of our students was very instrumental. He took the role of explaining in detail the different projects they did. It was great to see his passion, motivation and inspiration toward new inventions.
